

BreezyFarms is a wind farm company that owns wind farm sites in several states. The wind farm database for BreezyFarms will keep track of sites, turbines, repair materials, site managers, suppliers, turbine repair technicians, and repair parts.

Please review the requirements to construct your ER diagram:

- For each site, we will keep track of the unique site ID and site address (composed of street, zip code, and state).
- For each turbine we will keep track of a partially unique serial number (unique within each site), the year the turbine was made, the turbine's age (derived from the year it was made), the turbine's capacity, and the turbine's name. (Not every turbine has a turbine name.)
- For each site manager we will keep track of a unique manager ID, manager name (composed of first name and last name), manager cell phone, manager work phone, and manager home phone. (It is not required for a manager to supply their home phone.)
- For each turbine repair technician, we will keep track of a unique technician ID, technician name (composed of first name and last name), technician cell phone, technician work phone, and technician home phone. (It is not necessary for a technician to supply their home phone.)
- For each repair part, we will record a partially unique material number ID (unique within each supplier) and the part's name.
- For each material, we will keep track of the unique material number ID and the material name.
- For each supplier we will keep track of a unique supplier ID, supplier name, address (composed of street, zip code, and state), and multiple phone numbers.
- Each repair part must contain only one material, but each material may be used in many repair parts.
- Each manager can train zero to three managers, but each manager is trained by one manager, or none.
- Each site has one or many turbines and each turbine is located at exactly one site.
- Each site is overseen by exactly one manager and each manager manages one or many sites.
- Each technician reports to exactly one manager, and each manager manages many technicians, or none.
- Each technician repairs one or many turbines, and each turbine is repaired by one or many technicians.
- Each time a technician repairs a turbine, the type of repair and date of repair are recorded.
- Each repair part is supplied by exactly one supplier, and each supplier supplies many repair products, or none.
- Each repair part is used by exactly one repair technician, and each repair technician uses none, or many, repair parts.
- Each manager orders many or no repair parts, and each repair part is ordered by exactly one manager.
