

M1: University ERD

Criteria	14 points Exemplary	10 points Satisfactory	6 points Needs Improvement	2 points Unsatisfactory	Total Points
Entity	Diagram captures all entity sets necessary for a database that would satisfy the initial problem statement.	Diagram captures most entity sets necessary for a database that would satisfy the initial problem statement.	Diagram captures few of the entity sets necessary for a database that would satisfy the initial problem statement.	Diagram captures none of the entity sets necessary for a database that would satisfy the initial problem statement.	14
Attributes	Diagram captures all attributes necessary for a database that would satisfy the initial problem statement.	Diagram captures most attributes necessary for a database that would satisfy the initial problem statement.	Diagram captures few of the attributes necessary for a database that would satisfy the initial problem statement.	Diagram captures none of the attributes necessary for a database that would satisfy the initial problem statement.	14
Unique Identifiers	Diagram captures all unique identifiers necessary for an ERD that would satisfy the initial problem statement.	Diagram captures most of the unique identifiers necessary for an ERD that would satisfy the initial problem statement.	Diagram captures few unique identifiers necessary for an ERD that would satisfy the initial problem statement.	Diagram captures none of the unique identifiers necessary for an ERD that would satisfy the initial problem statement.	14
Relationships	Diagram captures all relationships necessary for a database that would satisfy the initial problem statement.	Diagram captures most relationships necessary for a database that would satisfy the initial problem statement.	Diagram captures few of the relationships necessary for a database that would satisfy the initial problem statement.	Diagram captures none of the relationships necessary for a database that would satisfy the initial problem statement.	14

Constraints	Diagram captures all cardinality and participation constraints necessary for a database that would satisfy the initial problem statement.	Diagram captures most of the cardinality and participation constraints necessary for a database that would satisfy the initial problem statement.	Diagram captures few of the cardinality and participation constraints necessary for a database that would satisfy the initial problem statement.	Diagram captures none of the cardinality and participation constraints necessary for a database that would satisfy the initial problem statement.	14
