

Step 1

Generate a schema called "student_organizations"

Step 2

Select the schema.

Step 3

After watching the video, create three tables.

Table 1. student

student_id	INT(11)	☒	☒	☐	☐	☐	☐	☐	☐
studentname	VARCHAR(45)	☐	☐	☐	☐	☐	☐	☐	NULL
studentgender	CHAR(1)	☐	☐	☐	☐	☐	☐	☐	'M'

<click to edit>

Table 2. organization

[illegible]

Table 3. belongsto

[illegible]

Loading Data

1. Manually input the following data to the student table:

<u>studentid</u>	studentname	studentgender
1111	Robin	M
2222	Pat	M
3333	Jami	F
4444	Abby	F

2. Cut and paste the rows from Excel spreadsheet to the Organization Table.
3. Save belongsto data as .csv and import into belongsto table.

Querying Data

Execute the following query:

```
use student_organizations;  
select studentname, b.orgid, orglocation, role  
from belongsto b, organization o, student s  
where b.studentid=s.student_id and  
b.orgid=o.orgid  
order by o.orgid;
```
