MySQL.com is using Oracle SSO for authentication. If you already have an Oracle Web account, click the Login link. Otherwise, you can sign up for a free account by clicking the Sign Up link and following the instructions.

[No thanks, just start my download.](#)

5. Click “No thanks, just start my download”.
6. Once the download has finished, open the file. It will ask you if you want to allow this app to make changes to your device. Select **Yes**.
7. It should give you a screen looking something like this:

8. Check “I accept the license terms” and then click **Next**. The following screen should appear:

9. Highlight **Custom** and click **Next**, and you should see the following screen:

10. Select the following (grab the latest version of everything!):

11. Go ahead and click **Execute**. This may take a few moments to complete. Your screen should look like this as it installs. The install may also include installing C++ :

12. If it looks like this, click **Next**.

13. You should be brought to this window:

14. Click **Next** to continue.

15. You should be brought to this screen.

MySQL Installer

MySQL Server 8.0.17

High Availability

Type and Networking

Authentication Method

Accounts and Roles

Windows Service

Apply Configuration

Type and Networking

Server Configuration Type

Choose the correct server configuration type for this MySQL Server installation. This setting will define how much system resources are assigned to the MySQL Server instance.

Config Type: Development Computer

Connectivity

Use the following controls to select how you would like to connect to this server.

☒ TCP/IP Port: 3306 X Protocol Port: 33060

☒ Open Windows Firewall ports for network access

☐ Named Pipe Pipe Name: MYSQL

☐ Shared Memory Memory Name: MYSQL

Advanced Configuration

Select the check box below to get additional configuration pages where you can set advanced and logging options for this server instance.

☐ Show Advanced and Logging Options

< Back Next > Cancel

16. These should be the default settings, but make sure that you have the same settings. Once you have confirmed this, press **Next**.

17. You should be brought to this screen. Pick the second option.

By default, the current root password is “root”. You must enter “root” as the Current Root Password. Then you must create a password and reenter it (I would STRONGLY suggest just entering “root” for all password fields, as it is an easy password to remember).

18. Once you have entered all passwords, click **Next**.

19. That should bring you here:

20. Make sure your window shows the same settings and click **Next**.

21. That should bring you here:

20. Click **Execute** to configure MySQL Server.

(If you get an error saying that “Applying security settings” has failed, this means that you had previously installed MySQL software and had set a password. You need to go back to Step 21 and enter your previous password as the “Current Root Password”.

21. If everything worked correctly, you should see this screen after a few moments:

22. Click **Finish**.

23. This should bring you to the final installation window:

24. Click **Finish** and MySQL should open. Once it has opened, it should look like this:

25. Double click on “Local instance MySQL Router.” That will bring up this window:

26. You must enter the password you created in order – “root” as suggested - to start using MySQL. I would suggest checking the option, “Save password in vault” so that you don’t have to enter your password every time you open MySQL. Click **OK** when you are done.

27. MySQL Workbench should look something like this:
