

MapReduce Algorithm – Part 2

Combiners

Combiners

MapReduce Algorithm with a Combiner

Map Reduce Comparison

MapReduce without Combiner

MapReduce with Combiner

Combiners

Advantages

- Combiner reduces the time taken for data transfer between mapper and reducer.
- It decreases the amount of data that needed to be processed by the reducer.
- The combiner improves the overall performance of the reducer.

Disadvantages

- MapReduce jobs cannot depend on the combiner execution because there is no guarantee in its execution.
- In the local filesystem, the key-value pairs are stored by the program and run the combiner later, which will cause expensive disk IO.
